|---|-----------|
| Preface | x |
| Acknowledgements | xiii |
| 1 Introduction | 1 |
| 1.1 Historical notes | 1 |
| 1.2 Defining competing risks | 2 |
| 1.3 Use of the Kaplan–Meier method in the presence of competing risks | 3 |
| 1.4 Testing in the competing risk framework | 5 |
| 1.5 Sample size calculation | 8 |
| 1.6 Examples | 9 |
| 1.6.1 Tamoxifen trial | 10 |
| 1.6.2 Hypoxia study | 11 |
| 1.6.3 Follicular cell lymphoma study | 16 |
| 1.6.4 Bone marrow transplant study | 16 |
| 1.6.5 Hodgkin’s disease study | 18 |
| 2 Survival – basic concepts | 23 |
| 2.1 Introduction | 23 |
| 2.2 Definitions and background formulae | 23 |
| 2.2.1 Introduction | 23 |
| 2.2.2 Basic mathematical formulae | 24 |
| 2.2.3 Common parametric distributions | 28 |
| 2.2.4 Censoring and assumptions | 30 |
| 2.3 Estimation and hypothesis testing | 31 |
| 2.3.1 Estimating the hazard and survivor functions | 31 |
| 2.3.2 Nonparametric testing: log-rank and Wilcoxon tests | 33 |
| 2.3.3 Proportional hazards model | 36 |
| 2.4 Software for survival analysis | 37 |
| 2.5 Closing remarks | 38 |
| 3 Competing risks – definitions | 39 |
| 3.1 Recognizing competing risks | 39 |
| 3.1.1 Practical approaches | 39 |
| 3.1.2 Common endpoints in medical research | 40 |

| | | |
|----------|---|-----------|
| 3.2 | Two mathematical definitions | 41 |
| 3.2.1 | Competing risks as bivariate random variable | 41 |
| 3.2.2 | Competing risks as latent failure times | 43 |
| 3.3 | Fundamental concepts | 44 |
| 3.3.1 | Competing risks as bivariate random variable | 44 |
| 3.3.2 | Competing risks as latent failure times | 48 |
| 3.3.3 | Discussion of the two approaches | 49 |
| 3.4 | Closing remarks | 51 |
| 4 | Descriptive methods for competing risks data | 53 |
| 4.1 | Product-limit estimator and competing risks | 53 |
| 4.2 | Cumulative incidence function | 55 |
| 4.2.1 | Heuristic estimation of the CIF | 56 |
| 4.2.2 | Nonparametric maximum likelihood estimation of the CIF | 58 |
| 4.2.3 | Calculating the CIF estimator | 59 |
| 4.2.4 | Variance and confidence interval for the CIF estimator | 62 |
| 4.3 | Software and examples | 64 |
| 4.3.1 | Using R | 64 |
| 4.3.2 | Using SAS | 69 |
| 4.4 | Closing remarks | 70 |
| 5 | Testing a covariate | 71 |
| 5.1 | Introduction | 71 |
| 5.2 | Testing a covariate | 74 |
| 5.2.1 | Gray's method | 74 |
| 5.2.2 | Pepe and Mori's method | 77 |
| 5.3 | Software and examples | 80 |
| 5.3.1 | Using R | 80 |
| 5.3.2 | Using SAS | 84 |
| 5.4 | Closing remarks | 84 |
| 6 | Modelling in the presence of competing risks | 87 |
| 6.1 | Introduction | 87 |
| 6.2 | Modelling the hazard of the cumulative incidence function | 87 |
| 6.2.1 | Theoretical details | 87 |
| 6.2.2 | Model-based estimation of the CIF | 92 |
| 6.2.3 | Using R | 93 |
| 6.3 | Cox model and competing risks | 102 |
| 6.4 | Checking the model assumptions | 104 |
| 6.4.1 | Proportionality of the cause-specific hazards | 104 |
| 6.4.2 | Proportionality of the hazards of the CIF | 109 |
| 6.4.3 | Linearity assumption | 110 |
| 6.5 | Closing remarks | 113 |

| | | |
|--------------|--|----------------|
| 7 | Calculating the power in the presence of competing risks | 115 |
| 7.1 | Introduction | 115 |
| 7.2 | Sample size calculation when competing risks are not present | 116 |
| 7.3 | Calculating power in the presence of competing risks | 118 |
| 7.3.1 | General formulae | 118 |
| 7.3.2 | Comparing cause-specific hazards | 119 |
| 7.3.3 | Comparing hazards of the subdistributions | 120 |
| 7.3.4 | Probability of event when the exponential distribution is not a valid assumption | 121 |
| 7.4 | Examples | 122 |
| 7.4.1 | Introduction | 122 |
| 7.4.2 | Comparing the cause-specific hazard | 122 |
| 7.4.3 | Comparing the hazard of the subdistribution | 124 |
| 7.5 | Closing remarks | 125 |
| 8 | Other issues in competing risks | 127 |
| 8.1 | Conditional probability function | 127 |
| 8.1.1 | Introduction | 127 |
| 8.1.2 | Nonparametric estimation of the CP function | 128 |
| 8.1.3 | Variance of the CP function estimator | 128 |
| 8.1.4 | Testing a covariate | 130 |
| 8.1.5 | Using R | 132 |
| 8.1.6 | Using SAS | 137 |
| 8.2 | Comparing two types of risk in the same population | 138 |
| 8.2.1 | Theoretical background | 138 |
| 8.2.2 | Using R | 139 |
| 8.2.3 | Discussion | 139 |
| 8.3 | Identifiability and testing independence | 143 |
| 8.4 | Parametric modelling | 144 |
| 8.4.1 | Introduction | 144 |
| 8.4.2 | Modelling the marginal distribution | 145 |
| 8.4.3 | Modelling the Weibull distribution | 146 |
| 9 | Food for thought | 149 |
| Problem 1: | Estimation of the probability of the event of interest | 149 |
| Problem 2: | Testing a covariate | 152 |
| Problem 3: | Comparing the event of interest between two groups when the competing risks are different for each group | 154 |
| Problem 4: | Information needed for sample size calculations | 158 |
| Problem 5: | The effect of the size of the incidence of competing risks on the coefficient obtained in the model | 159 |
| Problem 6: | The KLY test and the non-proportionality of hazards | 161 |
| Problem 7: | The KLY and Wilcoxon tests | 162 |

| | | |
|----------|---|------------|
| A | Theoretical background | 165 |
| A.1 | Nonparametric maximum likelihood estimation for the survivor function in the discrete case | 165 |
| A.2 | Confidence interval for survivor function | 167 |
| A.3 | The Variance for Gray's test | 168 |
| A.4 | Derivation of the parameters for the exponential latent failure time model | 169 |
| A.5 | Likelihood of a mixture of exponentials in the bivariate approach | 171 |
| B | Analysing competing risks data using R and SAS | 173 |
| B.1 | The R software and <code>cmprsk</code> package | 173 |
| B.1.1 | Downloading and installation | 173 |
| B.1.2 | Getting help | 174 |
| B.1.3 | Operators in R | 175 |
| B.1.4 | Objects in R | 175 |
| B.1.5 | The <code>cmprsk</code> package and datasets | 178 |
| B.2 | Importing datasets in SAS | 181 |
| B.3 | Other programs written for R | 182 |
| B.3.1 | CIF variance based on the delta method | 182 |
| B.3.2 | Pepe–Mori test for the difference between two CIFs | 183 |
| B.3.3 | Conditional probability and its variance | 185 |
| B.3.4 | Plotting the conditional probability | 187 |
| B.3.5 | Testing the conditional probability | 187 |
| B.3.6 | Calculating the conditional probability of observing the event of interest in a time period knowing that the patient was free of any event at the beginning of the period | 189 |
| B.3.7 | Comparing two types of risk in the same population | 191 |
| B.3.8 | Calculating the power | 192 |
| B.4 | SAS macros for competing risk analysis | 195 |
| B.4.1 | Cumulative incidence and conditional probability | 195 |
| B.4.2 | Pepe–Mori test for the comparison of two CIFs | 199 |
| B.4.3 | Pepe–Mori test for the comparison of two CPs | 203 |
